Copyright

All right, title and interest in this document are owned by the Crown and/or the contributors to the document unless otherwise indicated (where copyright be owned or shared with a third party). Such title and interest is protected by United Kingdom copyright laws and international treaty provisions.

The contents of the document are believed to be accurate at the time of publishing, but no representation or warranty is given as to their accuracy, completeness or correctness. You may freely download, copy, store or distribute this document provided it is not modified in any way and it includes this copyright and liability statement.

You may not modify the contents of this document. You may produce a derived copyright work based on this document provided that you clearly indicate that it was created by yourself and that it was derived from this document and provided further that you ensure that any risk of confusion with this document is avoided.

Liability

Whilst every care has been taken in the preparation and publication of this document, NICC, nor any committee acting on behalf of NICC, nor any member of any of those committees, nor the companies they represent, nor any person contributing to the contents of this document (together the "Generators") accepts liability for any loss, which may arise from reliance on the information contained in this document or any errors or omissions, typographical or otherwise in the contents.

Nothing in this document constitutes advice. Nor does the transmission, downloading or sending of this document create any contractual relationship. In particular no licence is granted under any intellectual property right (including trade and service mark rights) save for the above licence to copy, store and distribute this document and to produce derived copyright works.

The liability and responsibility for implementations based on this document rests with the implementer, and not with any of the Generators. If you implement any of the contents of this document, you agree to indemnify and hold harmless the Generators in any jurisdiction against any claims and legal proceedings alleging that the use of the contents by you or on your behalf infringes any legal right of any of the Generators or any third party.

None of the Generators accepts any liability whatsoever for any direct, indirect or consequential loss or damage arising in any way from any use of or reliance on the contents of this document for any purpose.

If you have any comments concerning the accuracy of the contents of this document, please write to:

0.8 SCOPE

The purpose of PNO-ISC/SPEC/004 is to specify the Transaction Capabilities (TC) which is standardised for use across a national interconnect between Public Network Operators to support non-circuit related applications which use Signalling System No.7 for network dialogues.

Note: In the past TC was known as TCAP, and is often still commonly referred to as such.

¹ ETSI Technical Specifications (ETSS) may be obtained from The ETSI Secretariat, F-06921 Sophia Antipolis, CEDEX — FRANCE, Telephone number +33 92 94 42 00.

² ITU Recommendations may be obtained from The Telecommunication Standardization Bureau, International Telecommunication Union, Place des Nations, CH - 1211 Genève, Switzerland. Fax: +41 22 730 5853

1 GENERAL

Where a standard, not UK specific, Application Part uses Transaction Capabilities (TC), the version of TC used shall be that referenced in the specification of the Application Part.

Where a UK specific Application Part uses TC, the TC shall conform to ETS 300 287-1, September 1996, Final Edition (reference [1]).

Those parts of TC used in the network dialogues of the applications described in Section 0.8 shall be provided. Those parts of TC not used by these applications are not required (but if provided, shall not be used in the network dialogues of these applications).

ANNEX A TESTING

This annex is informative

It is recommended that when a new application using TC is to be introduced across interconnecting networks the testing of the application should include tests for TC. The set of tests required for testing the TC would be dependent on the TC features used by the new application.

Only those parts of TC that are required for the application need be tested. The tests should include those which are applicable from the tests defined in ITU-T Recommendation Q.787 (March 1993) (reference [2]). It should be noted that the 03/93 version of Q.787 is for testing the 1988 (Blue Book) version of TC and, as such, any additional parts of TC that an application requires (e.g. White Book Application Context) will require additional tests.

END OF PNO-ISC/SPEC/004
