PLEASE READ –

The NICC EmLoc Task Group is currently, February 2019, reviewing the published ETSI approach to identifying location for emergency callers in SIP networks across the EU. This is likely to supersede ND1638 in some architectural aspects and in some technical standards.

Organisations are advised to contact the NICC secretary, secretary@niccstandards.org.uk for information on any standards contained in ND1638.

Anyone still wishing to view ND1638 should use the link here - ND1638.
